Verificare con i dati del costruttore del motore elettrico l'effettivo numero di avviamenti/ora che è in grado di sopportare il motore; salvo diverse indicazioni considerare un massimo di un avviamento/ora. In caso sia prevista la necessità di avviare il ventilatore più frequentemente è possibile ovviare installando un motore di taglia superiore. In avviamento la corrente di spunto può arrivare fino a 7 volte la corrente nominale, dimensionare in maniera opportuna la componentistica elettrica.

Mise en marche du ventilateur

Le démarrage doit se faire avec un ventilateur partielisé, en fonction de l'absorption maximale du ventilateur. Vérifier le nombre réel de mises en marche/heure avec les données du constructeur du moteur électrique, que le moteur est en mesure de supporter. Sauf indications contraires, considérer un maximum de mise en marche/heure. Si l'est prévu que le ventilateur doive être mis en marche plus fréquemment, on peut remédier en installant un moteur de dimension supérieure. A la mise en marche, le courant de démarrage peut arriver à 7 fois le courant nominal, prévoir une installation électrique de dimension adaptée à cet effet.

Orientations

No.8 RD (clockwise viewed from transmission side) and No.8 LG. Fan in bolted orientable version for sizes 400-630, with front support and so not orientable for sizes 710 and above with transmission drive, always orientable for directly coupled fans without front support. See pg. 2.7.

Special applications

See pgs. 2.22 to 2.36.

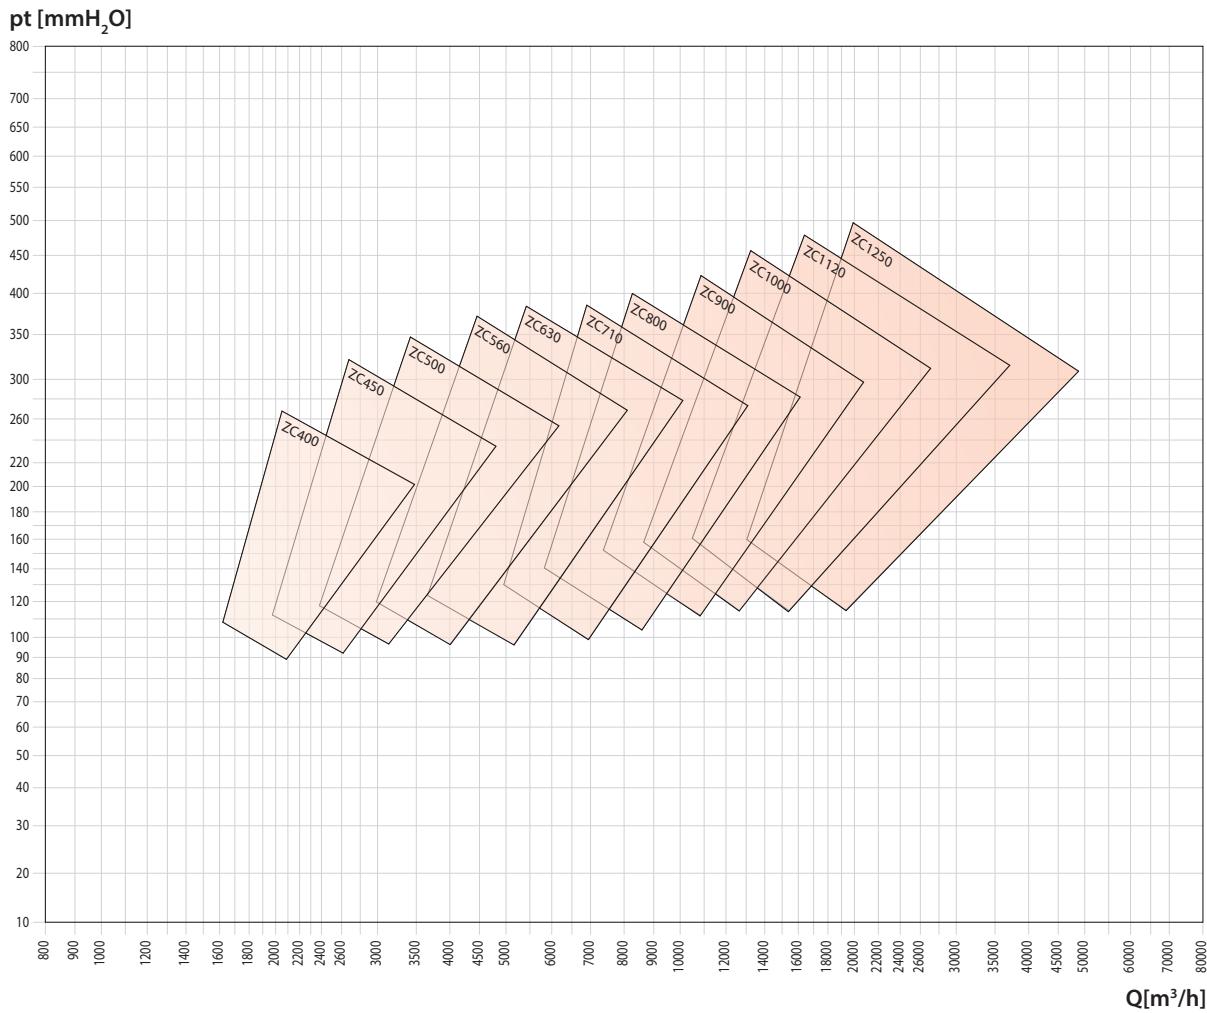

Fan start-up

During start-up the fan flow rate must be limited, calibrated for the fan's maximum electrical input. Check the electrical motor manufacturer's data for the effective number of start-ups per hour that the motor is able to sustain; unless otherwise indicated take one start-up per hour to be the maximum. If it is necessary to start up the fan more frequently and this can be achieved by installing a larger motor.

During start-up the peak current can reach as much as 7 times the nominal current and the electrical components should be scaled appropriately.

Impeller classes

The above table refers to standard operating conditions, in heavy-duty service conditions it is advisable to contact the MZ Aspiratori Customer Service to establish the most suitable type of impeller.

Puesta en marcha del ventilador

La puesta en marcha debe efectuarse con ventilador parcializado, en función de la absorción máxima del ventilador. Comprobar a partir de los datos del fabricante del motor eléctrico el número efectivo de encendidos/ hora que el motor puede soportar. Considerar un máximo de un encendido/ hora, de no indicarse lo contrario. En caso de que se plantee la necesidad de encender el ventilador con mayor frecuencia, la instalación de un motor de mayor tamaño puede evitar el problema. Durante el encendido, la corriente de arranque puede llegar a ser 7 veces la corriente nominal, por lo tanto, el tamaño y la capacidad de los componentes eléctricos deberán calcularse de acuerdo con ello.

The diagram illustrates the RD135 and LG135 components. The RD135 is a rectangular base plate with a central hole and a height of 811 mm. The LG135 is a semi-circular top plate with a diameter of 749 mm and a total width of 1045 mm. Arrows indicate the direction of assembly for both components.

The diagram illustrates the RD270 and LG270 components. The RD270 is a rectangular base plate with a central hole of diameter H2 = 672 mm. The LG270 is a semi-circular top cap with a diameter of 782 mm. Arrows indicate the assembly direction: one arrow points from the RD270 towards the LG270, and another arrow points from the LG270 towards the RD270.

The diagram illustrates the dimensions for the RD315 and LG315 models. It features a central circular component with a vertical height of 1045 mm and a horizontal width of 749 mm. A vertical dimension of 562 mm is shown from the base to the top of the central part. A horizontal dimension of 422 mm is indicated from the left side of the base to the center of the central part. Arrows point to specific features: one arrow points to the top edge of the central part, another to the right edge, and a third to the bottom edge.
