Verificare con i dati del costruttore del motore elettrico l'effettivo numero di avviamenti/ora che è in grado di sopportare il motore; salvo diverse indicazioni considerare un massimo di un avviamento/ora. In caso sia prevista la necessità di avviare il ventilatore più frequentemente è possibile ovviare installando un motore di taglia superiore. In avviamento la corrente di spunto può arrivare fino a 7 volte la corrente nominale, dimensionare in maniera opportuna la componentistica elettrica.

Mise en marche du ventilateur

Le démarrage doit se faire avec un ventilateur partialisé, en fonction de l'absorption maximale du ventilateur. Vérifier le nombre réel de mises en marche/heure avec les données du constructeur du moteur électrique, que le moteur est en mesure de supporter. Sauf indications contraires, considérer un maximum de mise en marche/heure. Si l'est prévu que le ventilateur doive être mis en marche plus fréquemment, on peut remédier en installant un moteur de dimension supérieure. A la mise en marche, le courant de démarrage peut arriver à 7 fois le courant nominal, prévoir une installation électrique de dimension adaptée à cet effet.

Special applications

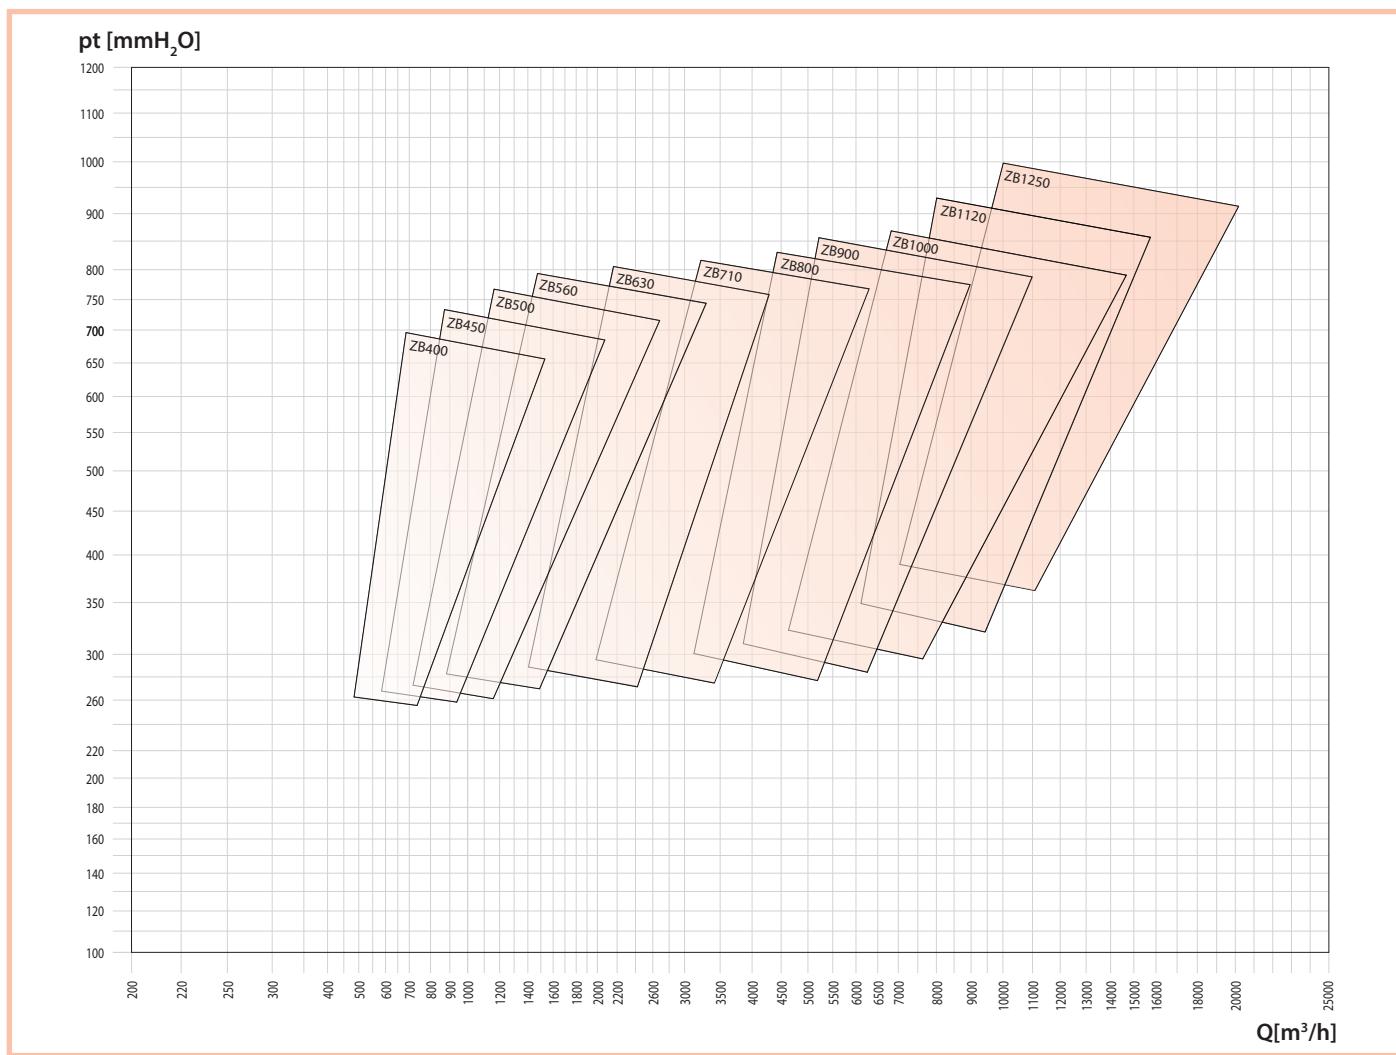

See pgs. 2.22 to 2.36.

Fan start-up

During start-up the fan flow rate must be limited, calibrated for the fan's maximum electrical input. Check the electrical motor manufacturer's data for the effective number of start-ups per hour that the motor is able to sustain; unless otherwise indicated take one start-up per hour to be the maximum. If it is necessary to start up the fan more frequently and this can be achieved by installing a larger motor. During start-up the peak current can reach as much as 7 times the nominal current and the electrical components should be scaled appropriately.

Impeller classes

The above table refers to standard operating conditions, in heavy-duty service conditions it is advisable to contact the MZ Aspiratori Customer Service to establish the most suitable type of impeller.

Puesta en marcha del ventilador

La puesta en marcha debe efectuarse con ventilador parcializado, en función de la absorción máxima del ventilador. Comprobar a partir de los datos del fabricante del motor eléctrico el número efectivo de encendidos/hora que el motor puede soportar. Considerar un máximo de un encendido/hora, de no indicarse lo contrario. En caso de que se plantea la necesidad de encender el ventilador con mayor frecuencia, la instalación de un motor de mayor tamaño puede evitar el problema. Durante el encendido, la corriente de arranque puede llegar a ser 7 veces la corriente nominal, por lo tanto, el tamaño y la capacidad de los componentes eléctricos deberán calcularse de acuerdo con ello.
